## DETAILED ACTION

### *Allowable Subject Matter*

**1. Claims 1-5 are allowed.**

The following is an examiner's statement of reasons for allowance: Claims 1-5 are allowed since certain key features of the claimed invention are not taught or fairly suggested by prior art. **In claim 1**, “a resultant vector of a vector that is directed in the first direction and detected based on a voltage output from the conductor when the voltage is applied between the first electrodes and a vector that is directed in the second direction and detected based on a voltage output from the conductor when the voltage is applied between the second electrodes; and a mean value of an angle, which is obtained from the voltage output from the conductor when the voltage is applied between the first electrodes, and an angle, which is obtained from the voltage output from the conductor when the voltage is applied between the second electrodes”. **In claim 5**, “a resultant vector of a vector that is directed in the first direction and detected based on a voltage output from the conductor when the voltage is applied in the first direction and a vector that is directed in the second direction and detected based on a voltage output from the conductor when the voltage is applied in the second direction; and a mean value of an angle, which is obtained from the voltage output from the conductor when the voltage is applied in the first direction, and an angle, which is obtained from the voltage output from the conductor when the voltage is applied in the second direction”. The closest prior art DeVolpi (5,912,612) teaches a multi-direction analog pointing device having a plus shaped upper contact with a central axis and having a number of ribs which radiate out from the central axis and the upper contact has a

bottom surface, and further wherein the bottom surface is electrically conductive; Vance (6,437,682 B1) teaches a pressure sensitive direction devices comprising a plurality of circumferentially displaced signal contact regions and a plurality of output contact regions interspersed with the plurality of signal contact regions, first member and second member having a connection region positioned adjacent the signal contact regions and output contact regions, however, singularly or in combination with other prior art, fail to anticipate or render the above underlined limitations obvious.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### *Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moon et al. (6,259,436 B1) teaches a touchable item depicted on a computer touch screen to select for an imprecise touch.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mansour M. Said whose telephone number is 571-272-7679.
